

ROTARY KILN TYRE

Rotary Kiln tyre is also called Rotary Kiln riding ring, Kiln tyre is one of the main parts of rotary kiln equipment. The kiln tyre can pass the all barrel gravity (include the gravity of refractory brick, internal device and material) to riding wheel, and make the barrel smoothly rotation on the wheel rotation, therefore the kiln tyre should have enough strength and durability. At the same time, kiln tyre strengthen barrel radial stiffness so it should has enough rigidity.

Our rotary kiln tyre exports all over the world, is one of China's leading supplier of rotary kiln tyre.

Our Rotary Kiln Tyre Features:

- 1.High strength and good durability
- 2.Advanced double medium quenching process
- 3.High quenching hardness
- 4.Good wear resistance
- 5.Simple structure and easy to adjust and repair

Weight : 5-80 t

Material : ASTM: 1045 / DIN: CK45

Applicable devices: rotary kiln

Application: Cement, Metallurgy, chemical industry, building etc.

Customizable : Yes

Rotary Kiln Tyre Quality assurance:

- 1.Chemical checking in the Qualified Lab
- 2.NDE after Rough Machining
- 3.Mechanical testing after Heat Treatment
- 4.Reliability and Safety Assessment
- 5.Final NDE, Dimensions check

China first-rate integrated service supplier of steel casting parts

Our service:

Prompt response in 24h after your inquiry

Several years high-precision processing experience

OEM service:

Advanced management ability with high technology

Strictly quality control

We design the production according to your drawing when you supply the design drawing.

CHAENG(Great Wall Casting Co.,Ltd

Custom 150-1 t Steel Castings according to Your Drawing

E-mail: casting@chaeng.co
