Advantages of CHAENG ball mill end cover:

1. High-quality raw materials, mature technology

Use high-quality raw materials and mature technology to guarantee the quality. CHAENG has a wealth of experience in manufacturing ball mill, in the production process, we continue to adopt new technologies and new process to enhance its wear resistance and pressure performance. Our advanced level-2 flaw detection equipment can detect the interior of the end cover accurately to assure the quality.

2. Components are sealed well, no leakage problem

CHAENG mill feed head can be produced for a specific device, making adjustments to a certain degree to make end cove joint better with feed components without gaps, to prevent material leakage problem.

3. Stable operation, long service life

CHAENG ball mill head adopts high-strength steel, and its structure is optimized by professional engineers according to the operation characteristics of ball mill, to greatly ensure the long-term operation stability and prolong the long service life.
